

Get Started with Electronic Referral Today

Ocean **eReferral** simplifies the referral process by enhancing communication between clinicians and enabling **quick and secure** referrals

Benefits of Ocean eReferral Include:

- Forms are pre-populated from the patient chart, ensuring you can easily send and receive **up-to-date patient information**, i.e., medication lists, allergies and calculated BMI
- Customized eReferral forms ensure that you receive **complete referrals**, eliminating the need to request additional information from the referrer
- eReferral forms include integrated clinical guidelines to support best practices, e.g., when it's clinically appropriate to request an X-ray versus MRI
- Administrative tasks are lessened, such as the need to make follow-up phone calls
- **Integration with most EMRs** allow you to receive and send referrals quickly and receive updates within your EMR
- Patients can confirm appointments online and choose to receive email notifications, which include referral status and appointment details
- All **costs are covered** as part of the Ontario eServices Program, including training and set up

“The Ocean eReferral system has many benefits to offer, and will greatly increase (efficient) dialogue between referral sources and specialists, and the sharing of patient information.”
